

## Self-educing water-foam branchpipe - 2700 l/min @ 7 bar

### CARACTERISTICS

|                                   |                                          |
|-----------------------------------|------------------------------------------|
| Code                              | • 20721                                  |
| <b>Construction</b>               |                                          |
| Body                              | • Aluminium alloy<br>• Polyester coated  |
| Screws and axles                  | • Stainless steel                        |
| Suction tube                      | • Stainless steel                        |
| Suction hose                      | • PVC, reinforced with steel wire        |
| <b>Hydraulic characteristics</b>  |                                          |
| Flow rate                         | • 2700 l/min @ 7 bar                     |
| Working pressure                  | • 16 bar                                 |
| Test pressure                     | • 25,5 bar                               |
| Suction                           | • By Venturi                             |
| Suction setting                   | • Adjustment by handle<br>• 0 - 3 and 6% |
| Type of foam agent recommended    | • All types of synthetic foams           |
| <b>Mechanical characteristics</b> |                                          |
| Inlet                             | • Male thread G 2 1/2 B                  |
| Suction inlet                     | • Storz D                                |
| Weight                            | • 5,44 kg                                |
